The nation is facing several serious challenges that the Biden administration has identified as top priorities — the COVID-19 pandemic, economic recovery, racial equity, and climate change. A new series of articles explores how the National Academies are providing timely, actionable advice to inform the new administration's efforts on these multiple crises.

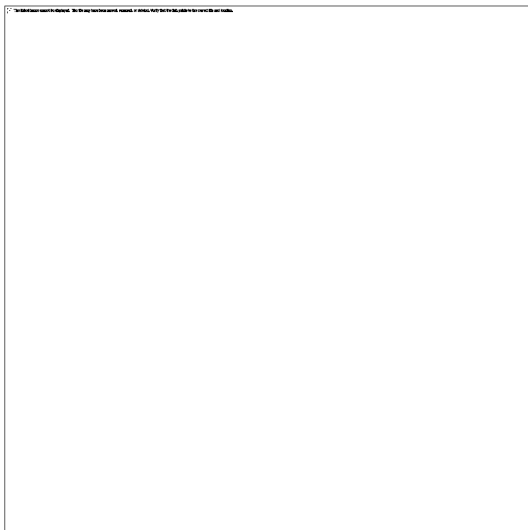

PANDEMIC RESPONSE AND RECOVERY

Controlling the COVID-19 pandemic is one of the Biden administration's most urgent priorities. The National Academies have been rapidly delivering science to help decision-makers respond to and recover from this crisis.

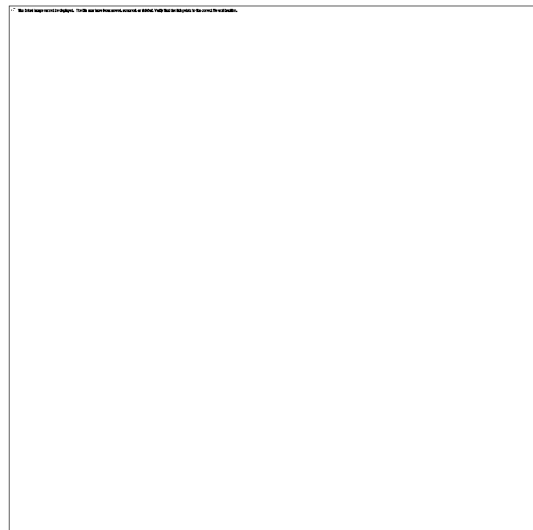

ECONOMIC RECOVERY FOR ALL AMERICANS

Science, engineering, and medicine can provide essential tools for the new administration's efforts to recover from the pandemic's devastating economic toll and build a more inclusive economy that benefits all Americans.

LEADERSHIP ON CLIMATE CHANGE

ADVANCING RACIAL EQUITY

The National Academies have an extensive body of work to inform the new administration's efforts to fight climate change, transform the economy, and build a more resilient, sustainable society.

The new administration has pledged a "major mobilization of effort and resources" to advance racial equity in America. The National Academies are marshalling the best evidence on the nature and consequences of systemic racial inequities to point the way toward solutions.
